## SUMMARY

Motivated Computer Science and Engineering undergraduate specializing in Information Systems, with hands-on experience in building full-stack web applications. Skilled in modern frontend and backend technologies, with a strong interest in Artificial Intelligence, Machine Learning, and data-driven systems. Actively exploring AI integration in web applications, including API-based AI tools and smart features. Passionate about developing scalable, user-friendly applications and continuously learning new technologies like AI agents, ML workflows, and automation systems. Seeking an entry-level web development role to apply technical skills and contribute to meaningful, intelligent digital solutions.

## EDUCATION

| <b>Movie Discovery Web App</b>   <i>React.js, Tailwind CSS, OMDb API</i>                                                                                                                                                                                                                                                                                                       | <a href="#"><u>GitHub</u></a>  |
| <ul style="list-style-type: none"><li>Developed a responsive movie discovery web app with real-time search functionality</li><li>Displayed movie details, including ratings, release dates, and descriptions, using OMDb API</li><li>Implemented loading states, error handling, and fallback UI for missing data</li></ul>                                                    |                                |
| <b>EatUp – Food Delivery App</b>   <i>Next.js, React.js, Tailwind CSS</i>                                                                                                                                                                                                                                                                                                      | <a href="#"><u>GitHub</u></a>  |
| <ul style="list-style-type: none"><li>Developed a responsive food delivery frontend with modern UI/UX and an interactive menu system</li><li>Implemented Add to Cart, cart management, and order tracking using local storage</li><li>Ensured a fully responsive design for smooth experience across all devices</li></ul>                                                     |                                |
| <b>Smart AI-Powered Weighing System</b>   <i>ESP32-CAM, C++, Edge Impulse, HX711</i>                                                                                                                                                                                                                                                                                           | <a href="#"><u>GitHub</u></a>  |
| <ul style="list-style-type: none"><li>Built an AI-based smart weighing system integrating ESP32-CAM, load cell sensor, and Edge Impulse ML model for real-time object classification</li><li>Calculated item weight and dynamic pricing using sensor data fusion and camera-based inference</li></ul>                                                                          |                                |
| <b>Animated 2D Graphics Simulation</b>   <i>OpenGL, C++, GLUT</i>                                                                                                                                                                                                                                                                                                              | <a href="#"><u>GitHub</u></a>  |
| <ul style="list-style-type: none"><li>Developed an interactive 2D animated environment with moving vehicles, sun, windmill, and river effects using OpenGL</li><li>Implemented real-time animation, user controls, and speed adjustment using GLUT timer and keyboard input</li></ul>                                                                                          |                                |

## SKILLS

- Languages:**  
TypeScript, JavaScript, HTML, CSS, PHP, C++, Python, R
- Frameworks & Libraries:**  
React.js, Next.js, NestJS, Express.js, Tailwind CSS, TypeORM, Zod, Axios
- Runtime Environment:**  
Node.js
- Database:**  
MySQL, PostgreSQL

- **Tools & Technologies:**  
Git, Postman, pgAdmin 4, RStudio, RESTful APIs
- **Design & Marketing Tools:**  
Canva, SEO tools, SEMrush

## **CERTIFICATIONS**

---

**AI Workshop** (Google Cloud)

November 2025

**Web development** (Internship)

Jan 2026 – April 2026

**IELTS Masterclass** (Certificate of Participation)

December 2025
